PROFILE

AI Solutions Consultant with 4+ years at Spotzer Digital, progressing from sales leadership to end-to-end AI delivery. Identifies high-friction processes, then designs, builds and deploys AI agents, integrations and internal platforms (LLMs, RAG, MCP, self-hosted models) and drives their adoption. Shipped an AI support workspace used by 100+ people, saving each 30 min–2 h a day, and trained 150+ employees in AI.

How I deliver: Identify → Decide → Prototype → Build → Deploy & feedback → Train & adopt → Improve

EXPERIENCE

Spotzer Digital, Amsterdam — *four roles in four years*

AI Solutions Consultant | *Aug 2025 – Present*

- **Identify & decide:** map how sales, support and operations really work, find where the business loses time or data control, and turn it into prioritised AI use cases with a clear build / no-build call.
- **Prototype to production:** build POCs, validate them with users, then own architecture, development, integration and deployment of the solutions that prove their value.
- **Model strategy:** select and implement models per use case across the company's Athena AI ecosystem — frontier APIs where capability drives value, self-hosted models where customer data must stay in-house.
- **Adoption:** run company-wide AI training (150+ participants) and a private AI platform on which teams have built 30+ agents.
- **Monitor & improve:** turn user feedback into delivery batches, and run a recurring AI watch that keeps teams on current tools and grounds tool choices in tests.

Sales Operations Manager | *Jul 2024 – Aug 2025*

- Owned forecasting, market performance and strategy analysis; introduced the company's first AI-assisted processes into sales operations — the bridge to the AI role.

Team Leader Sales | *Sep 2023 – Jul 2024*

- Led and coached a sales team and streamlined sales-to-delivery handovers; CEO Award for taking over the team and bringing it to target quickly.

Sales Market Leader — FR Market | *Apr 2022 – Sep 2023*

- Owned French-market sales through direct client engagement and tailored offers.

SELECTED AI PROJECTS

FreeScout AI Copilot · *AI support workspace — in production, 100+ users*

- **Problem:** support agents juggled tickets, call transcripts and AI tools across separate systems, with no single customer view and customer data at risk of third-party exposure.
- **Built:** full-stack workspace (React / TypeScript, Node / Express, Docker) unifying tickets and call transcripts with contextual AI search, draft replies, templates, scheduled sends and customer briefs; strict customer-context isolation before any model call, human review before every send.
- **Impact:** 30 min to 2 h saved per user per day, a clearer view and tighter control of customer data, and a roadmap driven by user feedback (e-mail translation, internal notes, ticket sharing, attachments).

AI Day & private AI platform · *company-wide AI adoption*

- **Problem:** AI used ad hoc through personal accounts, with no shared practice and no control over company data.
- **Built:** company-wide training (prompting, data security, hallucinations, RAG, MCP, hands-on agent creation) and a private ChatGPT-style platform on LibreChat, connected to company tools over MCP, so teams use AI ethically on their real work.
- **Impact:** 150+ participants, 30+ agents built by the teams themselves, faster adoption of new tools and simpler collaboration across teams.

Docflow · *document governance platform — deployed*

- **Problem:** across thousands of Drive files nobody knew which document was current, owned or approved, and AI tools had no governed corpus to read from.
- **Built:** Node.js / React portal with Google Drive as the single source of truth: document admission, versioning and ownership, SQLite registry with audit log, access-aware search by cited passages, native text extraction and on-demand OCR.
- **Impact:** used by all team leaders and the executive team (30 people), with a dedicated owner controlling what is current and approved.

Athena · *company AI ecosystem (Cortex, AI Coach, Recall…) — structure, prompting & models*

- Active contributor to the ecosystem's structure, prompting and model choices and their implementation: unified the Cortex pipeline prompts for a small self-hosted model with a benchmark harness on real samples, and connected Cortex customer briefs to the support copilot.

AI watch & newsletter · *keeping teams on current tools*

- A recurring watch on new AI tools, models and repositories, shared as a newsletter: keeps teams up to date, feeds new experiments and keeps tool choices grounded in tests rather than hype.

Also built · *smaller tools*

- An internal CRM on the open-source Twenty base (in progress), a quote calculator for sellers (60-service catalogue), a client-export filter in daily use, and horn-dev, a public Claude Code plugin that enforces one delivery method across projects.

TECHNICAL SKILLS

AI & agents: Agent design, MCP servers, RAG, prompt engineering & evaluation, guardrails & hallucination control, n8n, LibreChat, Claude Code, Codex

Models: Claude, GPT, Gemini; self-hosted LLMs (LM Studio, vLLM, Ollama); benchmarking & selection per use case

Engineering & deployment: TypeScript, React / Vite, Node.js / Express, Python, SQLite, MongoDB, Docker & Compose, GitHub Actions, Playwright

Business: Salesforce, Google Workspace APIs, Power BI, Tableau, discovery workshops, training & change management

EDUCATION

- Self-taught in AI engineering and software delivery — the projects above are the proof of work.
- Architecture studies, ENSAG, Grenoble — 2013–2015.
